

POUSHIKA SHARMA

poushikasharma0@gmail.com

8101214630

Aspiring Product Engineering professional with a strong foundation in electronics and embedded systems. Experienced in braking system safety, unit testing, and automation during internship at Bosch. Additionally skilled in full-stack development (Java, Angular, Oracle) with hands-on project experience. Seeking to apply technical expertise in electronics while leveraging software skills for multidisciplinary product development.

EXPERIENCE

Bosch Global Software Technologies – Internship (ESN Dept., Ford, Braking Systems)

OCT 2022 – MAY 2023

- Performed unit testing and validation of critical braking system modules to ensure safety compliance and functional reliability.
 - Supported software development and automation activities for embedded braking systems, contributing to efficiency improvements and reduced manual testing effort.
 - Utilized automotive tools such as CAN Analyzer and DK Red Hat to analyze communication signals, debug issues, and validate ECU performance.
 - Gained exposure to advanced braking technologies including Anti-lock Braking System (ABS), Traction Control System (TCS), Electronic Stability Program (ESP), Regenerative Braking, Integrated Power Brake, and Active/Passive Braking Systems through knowledge transfer sessions and training.
 - Learned about critical automotive sensors such as vertical sensors and wheel speed sensors, and their role in ensuring vehicle safety and stability.
-

Bosch Global Software Technologies – Apprenticeship (Full Stack Development)

MAR 2025 – PRESENT

- Completed intensive full-stack development training (Java, Angular, Spring Tool Suite, Oracle DB).
 - Contributing to a Supply Chain Inventory Management project, working across frontend and backend modules.
 - Worked on Oracle database operations including queries and schema design.
-

EDUCATION

B.Tech in Electronics and Telecommunication || KIIT – Deemed to be University

JUNE 2019 – JUNE 2023

- CGPA 8.5/10
 - Developed an iris-based security system using ML and DFFT with hardware-software integration for reliable authentication.
-

EDUCATION

- Electronics & Embedded Systems
 - Digital Electronics
 - Microcontrollers and Microprocessors
 - Basic knowledge of communication protocols
 - C, C++
-
